

Applied AI Portfolio

Ebunola Amoye

Computer vision • intelligent automation • field systems

github.com/Amoyeola/Peter-Amoye-AI-Portfolio

My experience connects AI models with real operating systems

Practical focus

I combine applied AI training with electrical, telecommunications, field-service, and technical-operations experience.

My goal is to build reliable systems that support transportation, infrastructure, safety, and automation.

VISION

YOLO • OpenCV • tracking

MODELS

PyTorch • CLIP • BLIP

TOOLS

Python • Colab • GitHub

DOMAIN

Traffic • ports • field systems

Tracker comparison turns raw IDs into an engineering finding

YOLO VIDEO OBJECT TRACKING

I ran ByteTrack and BoT-SORT on the same ten-second video, counted people manually, and investigated short tracks and identity switches. BoT-SORT came closest to the observed count.

73

Manual count

74

BoT-SORT IDs

79

ByteTrack IDs

Three projects demonstrate breadth across modern computer vision

Featured work

Each repository folder includes the executed notebook, a clear README, dataset guidance, key findings, and representative results.

The work progresses from visual understanding to temporal tracking and decision-oriented analytics.

01

SmartFlow Traffic Agent

02

YOLO Video Tracking

03

CLIP & BLIP VLMs

VALUE

Documented • reproducible • applied
